

Maintaining temperatures and humidity levels are some of the critical climate control parameters for medical facilities to prevent the spread of pathogens. Normal required operational temperature and humidity ranges vary depending on the time of the season, activity in the room, etc. The Illinois Department of Public Health (IDPH) is a government agency that prevents and controls disease and injuries in Illinois. Facility Engineers/Managers pay close attention to temperatures, humidity, IAQ to mention a few. Climate Control is a must! When the temperature and humidity are on the borderline of health risk guidelines, that's when Renting AC equipment is an ideal option. We can control both heating and cooling temperatures with a portable heat pump. We hope you give us a call since we take pride in providing great service to solve climate control issues that protect our community. We take extra pride in sanitizing our equipment with the proper disinfectants and wrapping entirely with protective plastic shrink wrap. Depicted are a few portable cooling units dispersed in a dialysis center located in Elgin, IL.
