

With the addition of supplemental portable coolers, a Lake Villa, IL grade school stayed cool. Their main RTU could not keep up with the outdoor heat in the summer of 2023. Supplemental rental air conditioners help tremendously when the outdoor temperature and humidity soar. Removing humidity from the surrounding indoor air allows one to evaporate perspiration from the skin resulting in cooling relief. Many units were installed throughout the school classrooms. Our technicians installed portable AC equipment late at night while the kids were home sleeping.
