

Large warehouses are often in need of spot coolers to keep workers productive during the blistering summer heat. When humidity in the Midwest increases the heat index level well beyond the temperature reading, safety is a top priority. When Rent AC received the call from a manufacturer in Elgin for a spec-out, we immediately responded. When the customer told us we were very competent about our business, the rest was history. We thrive on customer care and are always available to spec-out your facility at no cost. Please feel free to give us a call 24/7 at (224)535-8363.
